Rule of Village provide a more certain guarantee that each village will receive funding from the government through the state and regional budgets which are multiplying, far above the amount currently available in the village budget. This study aims to determine the accountability of Village Fund management in the Hard Village of the District of Diwek, Jombang Regency

This research includes descriptive qualitative research, namely the analysis technique in the form of describing or expressing the characteristics of the variables that are the focus of the researcher, namely revealing related matters regarding the management of village funds (DD) in the development of the Hard Village of Diwek District, Jombang Regency

The results of the study indicate that the planning, implementation, administration, reporting and accountability stages have not been fully managed accountably. This is because the process of preparing the Village Development Work Plan (RKPD) and the Budget Plan (RAB) prepared by the village government has not been fully communicated to the public, then there are still programs for using village funds that are not in line with the priority of village funds. And the inadequacy of village fund accountability reports submitted by the village government to the community
