Terjadinya resesi ekonomi mampu mendorong perlambatan pertumbuhan ekonomi Indonesia, salah satu nya dalam sektor asuransi. Perlambatan pertumbuhan tersebut memicu munculnya permasalahan dan risiko. Hal tersebut dapat mendorong perusahaan untuk melakukan evaluasi penilaian risiko dan pengukuran kinerja. Penelitian ini bertujuan untuk menganalisa perbandingan kondisi risiko dan kinerja keuangan perusahaan asuransi yang terdaftar di Bursa Efek Indonesia pada periode sebelum dan setelah terjadinya resesi ekonomi tahun 2018. Penelitian dilakukan dengan menggunakan metode *event study* dengan alat analisis uji t terhadap indikator risiko berupa rasio solvabilitas dan *risk based capital*, serta terhadap indicator kinerja keuangan berupa rasio likuiditas dan rasio profitabilitas. Hasil penelitian ini menunjukkan bahwa kondisi solvabilitas, risk based capital, likuiditas dan profitabilitas perusahaan asuransi sebelum terjadinya resesi ekonomi tidak berbeda secara signifikan dengan setelah terjadinya resesi ekonomi. Hal itu menunjukkan bahwa terjadinya resesi ekonomi tidak mempengaruhi kondisi risiko dan kinerja keuangan khususnya pada perusahaan asuransi di Indonesia secara jangka pendek.

The occurrence of an economic recession is able to encourage a slowdown in Indonesia's economic growth, one of which is in the insurance sector. The slowdown in growth has triggered problems and risks. This can encourage companies to conduct risk assessment evaluations and performance measurements. This study aims to analyze the comparison of risk conditions and financial performance of insurance companies listed on the Indonesia Stock Exchange in the period before and after the 2018 economic recession. The study was conducted using the event study method with t test analysis tools on risk indicators in the form of solvency ratio and risk based capital, as well as financial performance indicators in the form of liquidity ratios and profitability ratios. The results of this study indicate that the conditions of solvency, risk based capital, liquidity and profitability of insurance companies before an economic recession do not differ significantly from those after an economic recession. This shows that the occurrence of an economic recession does not affect risk conditions and financial performance, especially for insurance companies in Indonesia in the short term.
