This study aims to analyze and explain the effect of work rotation and employee engagement on employee performance in savings and loan cooperatives Mitra Raya Kab. Jombang. This type of research uses verification research using a quantitative approach. The number of samples determined as many as 40 respondents with a saturated sample method. The analysis used includes validity test, reliability test, descriptive analysis, inferential analysis, classical assumption test, and multiple linear regression using SPSS (Statistical Product and Service Solution) tools. The results showed that the job rotation variable had no effect on employee performance and the employee engagement variable had no effect on employee performance. Thus, it can be concluded that job rotation and employee engagement had no effect on employee performance.
